

LipoliftTM
pro

Bio-active body contouring

proven • effective • lasting

How Does it Work?

Lipolift pro™ is a highly effective cell fat reduction treatment. It works by breaking down fat cells and aiding the body in transporting released Triglycerides through the body's natural selective waste processes allowing the contents of the fat cell to be naturally eliminated from the body.

Being bio active, Lipolift pro™ is highly effective when used with heat or technologies such as ultrasound cavitation, laser lypolysis, radio frequency or LED.

Once applied, Lipolift Pro will continue to work for 72 hours further increasing results to aid in fat cell disposal from the body.

Why is the science behind Lipolift so special?

Developed by industry leaders in the aesthetic field, alongside specialist UK chemists, Lipolift's development has been based on years of clinical studies relating to cell fat reduction and its long term effects.

Lipolift's unique action is based on its active ingredient belonging to the phospholipids family. This ingredient is then hydrolysed and the bio active molecules retrieved to produce the highest strength in its purest form. This creates a quicker and more intense cross link with the targeted adipose fat cell.

Lipolift is applied topically and its key ingredients provide a transdermal delivery system for the bio active phospholipid. Being bio active, Lipolift is more efficient when environmental and mechanical energies are applied: for example heat, ultrasound cavitation, light and pressure, are all trigger factors to deepen and destruct the bio synthesis of the phospholipids.

When applied to the skin surface, the transdermal delivery system transports the bio active phospholipid into the subcutaneous fat layer in seconds allowing the hydrolysed phospholipids to remain at their optimal effectiveness.

When the bio active ingredients reach the fat cell, an intra-cellular reaction occurs as the phospholipids come into contact with the cell wall membrane. This causes breakdown in lipid structure through dispersion of the phosphate heads allowing the tail end of the phosphate to release into the aqueous environment of the semi inclusion liquid held in the cytosol of the cell allowing free movement of tryglicerides.

The action of the unique phospholipid in Lipolift aids the transportation of the free flowing inclusion by way of the emulsified triglycerides being in lipid state. This, therefore, enables more direct transportation to the lymph vessels and is exited from the body via the waste systems.

How does Lipolift work with my technologies?

Lipolift is a unique product, developed to be bio active in the presence of existing body contouring technologies.

All research and development into the creation of Lipolift pro has been based on long term clinical study data.

If you are using Lipolift with ultrasound, radio frequency, laser lypolysis or LED, adding no extra treatment time.

Or alternatively, product can be applied followed by the cellulose membrane and the client would be required to relax within a heated blanket or infra red for a period of one hour.

The bio active phospholipid is most effective in the presence of either:

THERMAL ENERGY

- Radio frequency
- Broad spectrum IPL
- Selective IPL at 640 nm
- Infra red or near infrared equipment such as lamps and heated blankets

ULTRASOUND

- Ultrasound cavitation devices
- No needle mesotherapy devices
- Ultrasound infusion Systems

LED AND LASER LYPOLYSIS DEVICES

- Low level laser diode devices, belt and paddle fitted or canopy from 600- 670nm
- Red light led devices at 600-670nm

PRESSURE AND VACUUM MASSAGE DEVICES

- Endermologie
- Lymphatic drainage massage suits
- Air pressure massage device

- Results are immediate and will increase over 72 hrs
- Aids in removal of fat cells
- Treatments can be performed every 7 – 10 days
- Non invasive
- Pain free
- No raised blood sugar
- No risk of allergic reactions
- Effective homecare products available
- Unique retail range to increase salon revenue

Lipolift pro is a transdermal fat cell reduction solution. It can be used with your existing technologies or on its own with applied heat and our unique cellulose membrane.

Lipolift pro conducting gel is designed to be used with technologies requiring a liquid conductor, such as; radio frequency, ultrasound and non surgical facelifting technologies.

Lipolift lite cellulcare serum

is unrivalled in reducing the stubborn fat cell build up, the main cause of cellulite. This product is available for use post treatment or as a unique retail opportunity. It is suggested that clients use this daily at home.
